

Long Do

Penetration Tester / Security Analyst

(+1) 223-269-9078 | doquanglong280504@gmail.com | github.com/Doquanglong | linkedin.com/in/doquanglong

EDUCATION

Dickinson College, Carlisle, Pennsylvania

2022 – 2026

Bachelor of Science, Computer Science and Mathematics

SKILLS

Security & Pentesting: Web application testing (OWASP Top 10), Vulnerability assessment & reporting, SOC, API security testing, SIEM

Programming & Scripting: Java, Python, HTML/CSS, Bash, JS

Tools & Platforms: Burp Suite, Nmap, Nessus, Wireshark, Kali Linux, Metasploit, Ubuntu, Kibana, Docker, Splunk, Microsoft Defender, AWS, Windows, SQL, Powershell, Hydra, Git

Mobile & Application Security: Dynamic instrumentation (Frida), Genymotion, Smali and bytecode-level inspection

Certifications: Google Cybersecurity Professional Certificate, HTB Certified Junior Cybersecurity Associate (CJCA)

EXPERIENCE

Pentester Intern – NCS (National Cyber Security)

May - August 2025

- Performed penetration testing on 5+ web and mobile applications using OWASP Top 10 methodology, documenting 5 findings across authentication, IDOR, and input validation issues
- Discovered a device integrity bypass in a banking app allowing jailbroken devices to access sensitive financial data
- Identified an IDOR vulnerability enabling authenticated users to access other users' account data via request parameter manipulation
- Developed proof-of-concept exploits and authored vulnerability reports with severity ratings and remediation recommendations
- Led a team of 3–5 to plan and execute simulated real-world attack scenarios across target applications

Developer Intern – ELCOM

May - August 2024

- Designed and developed responsive front-end components for 3 client-facing web applications, including a hospital staff publication platform
- Conducted automated security scans on 4 web applications to identify common web vulnerabilities
- Reduced false positives by manually validating scan results before reporting findings
- Collaborated with developers to remediate vulnerabilities and verify fixes prior to deployment

Developer Intern – NGS Digital

June - August 2023

- Developed and maintained a dynamic web application dashboard for 10+ internal users to manage customer and sales data
- Administered role-based user access and authorization levels to restrict sensitive customer data to authorized personnel
- Integrated Salesforce workflows across analytics and marketing processes to streamline operations
- Collaborated with a cross-functional team of 5 in an agile environment, participating in sprint planning and iterative delivery

PROJECTS

Host Based DOS Attack Detector

- Engineered a Python host-based detection and response tool that analyzes live network traffic to detect rate-based DoS attacks using a sliding-window algorithm
- Automated threat containment by dynamically blocking malicious IPs through firewall controls (iptables/Windows Firewall), with auto-restore and whitelisting to eliminate false positives
- Applied detection engineering and incident response principles to emulate real-world blue-team defense

Web Application Recon Automation

- Developed a Python automation pipeline that streamlines subdomain enumeration, live host detection, port scanning, and directory brute-forcing
- Integrated Nmap and industry-standard recon utilities, deduplicating results into structured outputs to cut manual reconnaissance time

File Type Identifier

- Built a Python tool that verifies a file's true type by parsing magic-number byte signatures, defeating extension-based spoofing used to disguise malicious files
- Detects disguised files (e.g., a malicious .sh renamed to .svg) by cross-referencing content signatures against claimed extensions, reading headers without execution using only the standard library
